250-word Statement of Purpose describing what you propose to achieve by doing this programme and for what ultimate goal:

Since I was a young child, I have always had a keen interest in learning about the science of computers and information systems and have developed a keen eye for the emerging technologies around me. I want to earn a master's degree in computer science from a prestigious university in order to expand my technical knowledge and acquire the skills necessary to advance in the technology. Artificial intelligence, which quickly became an essential component of every technology around us, particularly piqued my interest. I found the concept of how a machine can learn and mimic human behaviour to be an incredible phenomenon with the potential to significantly alter our lives. In order to fully comprehend this field, I decided to pursue a Bachelor of Engineering degree in Information and Communication Technology for my undergraduate studies. During my bachelor's degree, I worked on a variety of projects, including building an AI that can convert your speech commands into working commands, extracting text from images, developed some interesting games as well as worked on some great ML and deep learning projects. My github repository, "WWW.Github.com/DhairviShah," also contains a number of interesting projects. I likewise have 27 months of absolute work insight in this field. I have worked with associations like Magenta Bi, ISRO-SAC, Makemargins LLP. This is the reason why I applied at your university as it would help me in taking few further steps toward my goals. Thank you for your time and consideration.

**Declaration by father or guardian (or employer where applicable):**
